Détails des commodités

High quality fittings and incomparable construction quality.

Since the builder has already built a multi-family house in the village of Tires, it is possible to see the building that has already been completed.

The building will be built according to the Climate House A Nature standard.

Compared to neighboring villages like Siusi, Castelrotto and Fiè allo Sciliar, Tires still has a high development potential.

Recently, a new cable car has been built in Tires, connecting the village with the hiking and skiing area Carezza. This redevelopment will have a positive effect on the development of property prices in the village. In addition, most of the newly built apartments have to be conventional and therefore cannot be used as vacation homes, which guarantees a high value for the new unconventional apartments.
